

# Networked Multimedia at Your Command.

## InfoChannel<sup>®</sup> NETWORK MANAGER 3

Schedule and  
broadcast  
multimedia  
content to your  
own TV station  
or network of  
dynamic signs.

### Multimedia Management Software

InfoChannel Network Manager 3 is a server based application that schedules the transmissions of multimedia content to hundreds, even thousands of display monitors (plasma, TVs, kiosks) from a single desktop. Advertising, news, training or virtually any other visual communication can be easily distributed to InfoChannel Players via any standard network. Content created using InfoChannel Designer 3 or Reporter 3 is automatically routed to the intended players.

Network Manager 3 is available in two versions. One is designed for television stations and small to medium size networks. An Enterprise Edition is also available for larger networks and is expandable to satellite and multicast broadcasting with InfoChannel Broadcast Server 3. See the back of this sheet for more details on both editions.

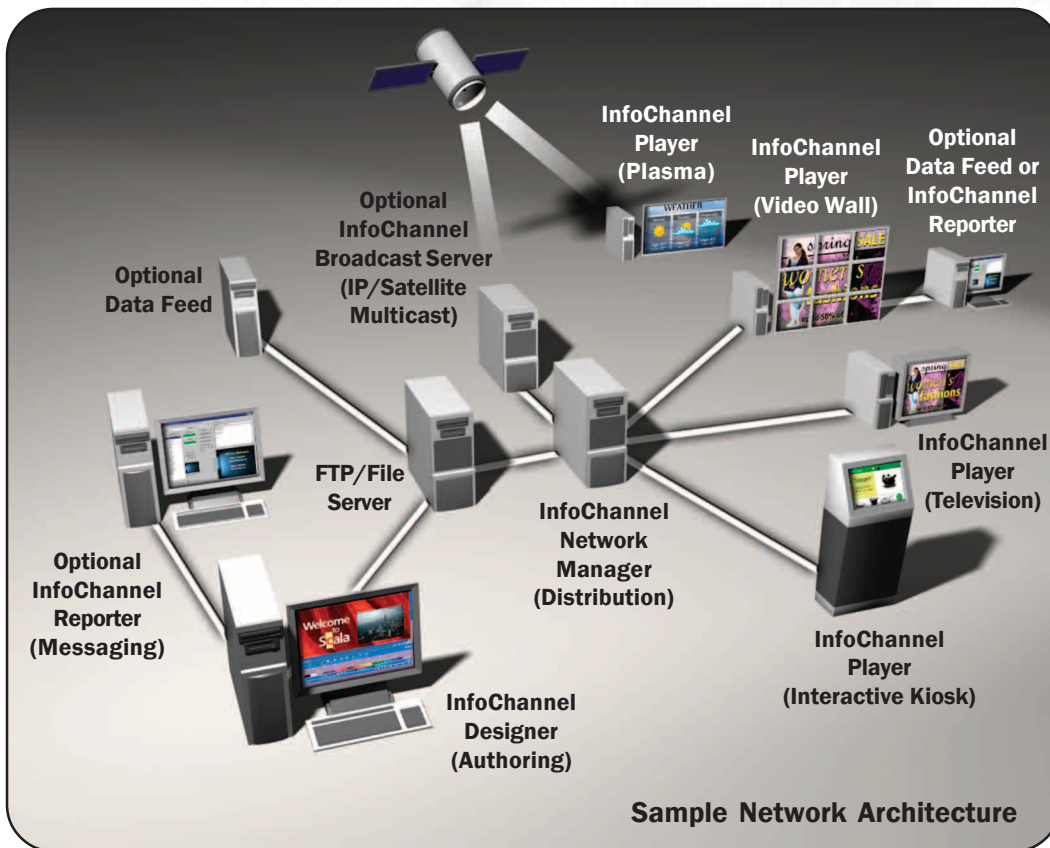

**KEY FEATURES**

- Easy to use server based software.
- Player management and content transmission via FTP or UNC.
- Content can be stored on independent sites.
- Players can be instructed to send or receive content or individual files.
- Transmissions can be scheduled or triggered by updates in content.
- Remote player administration allows control of files, clock, reboot, etc.
- Network monitoring shows the status of your InfoChannel Players.

**ADDITIONAL FEATURES OF ENTERPRISE EDITION**

- Access InfoChannel Network Manager 3 via the Internet from any PC using a web browser.
- Players can be grouped according to criteria: geography, demographics, sales, etc.
- User accounts have passwords and access levels.
- View-only and view/modify modes support multiple concurrent users.
- Expandable to satellite and multicast transmission with InfoChannel Broadcast Server 3.
