

ScotWeave is the most **comprehensive CAD-CAM tool** for woven textile design currently available. Using an intuitive visual design approach ScotWeave is simple to use, quick to learn, and produces stunning results on screen, on printer and direct to loom. ScotWeave software runs under all current versions of **Microsoft Windows®**, uses industry standard computer hardware, and any Windows®-compatible colour printer, scanner or other hardware.

Dobby Designer

ScotWeave Dobby Designer is extremely versatile in its approach to design creation and in its capabilities. It can be used to create virtually any type of doobby fabric and has applications in menswear, ladieswear, upholstery, accessories, automotive fabrics and even technical fabric design. The ease of use and advanced **Weave 3D** feature (which allows you to move around a weave structure) also make it very useful for educational purposes.

The correct application of ScotWeave Dobby Designer will reduce design time, reduce sampling time, increase design output and increase productivity by eliminating construction errors and costly, ineffective production samples.

Jacquard Designer

ScotWeave **Jacquard Designer** provides the complete solution for jacquard design - from artwork, through weave selection and editing, to the creation of loom disks or card cutting data. Jacquard Designer uses the same design and operation principles as Dobby Designer - it is simple and fast to use yet extremely versatile and technically accurate.

Velvet

ScotWeave **Velvet Designer** products provide the complete solution for face to face woven velvet fabric design with colour pattern, layouts on screen and colour printout simulations, including "cut out" designs and full production specifications.

Dobby Velvet Designer has multi-beam, multi-tension yarn capabilities. A cross-sectional view allows easy creation of pile travel, or draw the fabric motif required and let ScotWeave generate the peg/chain plan. Use **Jacquard Velvet Designer** to create velvet jacquard fabrics from artwork to loom disk. Includes full weave editing (hole finding) features.

Drape

ScotWeave **Drape** is a three-dimensional visualization tool that allows you to see ScotWeave fabrics realistically draped over images of garments and other real-life objects. The fabrics will follow the contours of the 3D objects and retain the shading of the objects.

Combined with the ScotWeave Presentation Program for storyboard layout, it is the ideal way to show customers simulated swatches of fabrics and their intended end use.

ScotCom

The ScotWeave **ScotCom** product offers a range of internet solutions, which allow you to communicate design data over the web. You can create databases of design collections on the web for the sole use of sales agents or customers, or simply use the web as a quick and low-cost method of transferring design data between different sites.

Software Support

Software support is a high priority at ScotWeave, and we believe our support is second to none. All ScotWeave software products are fully supported (i.e. we can add new features, change existing features, provide full problem solving and bug fixing).
